

SOFTWARE ENGINEER

Come and join us to tackle with climate change together

At Evercomm, you will have chance to work with young talents and experts in their field of Energy/AI/IoT. You are welcome to establish, create, and initiate new ideas here as long as you are able to push yourself and company to grow!

Who we are & What we do

Founded in 2013 at Singapore, Evercomm is a rapidly growing Singapore startup focusing on wireless IoT, data analytics and energy management for semiconductor, data center, HVAC, and renewable industries. It is headquartered in Singapore with branch offices in Taiwan and Myanmar. By using industrial-ready AI, we help energy-intensive enterprise across various industries in Asia to better optimize their operations.

We are looking for people who is:

- Agile-oriented; focused on delivery and problem solving first
- Dedicated; take ownership to finish tasks on time with high quality
- Adaptive; responsive for on-demand changes
- With self-learn attitude; collecting feedbacks and defining actions for self-improvement
- Communicative, good command of English skills

Job Responsibilities:

- Work with team members and follow-up with internal stakeholders collaboratively, complete code and document reviews and issues on demand
- Participate in requirements analysis, design of requirements, and implementation
- Design test scenarios and perform testing and report for software usability
- Propose ideas and improvement plan on feature specifications to meet client requirement and software quality
- Support team to meet project deadlines and resolve issues proactively

Key Qualifications Required:

- Diploma/Bachelor Degree in Computer Engineering/Science or Software Engineering, Information Technology or equivalent
- Understand current web development standards, software development paradigms and design patterns
- Equipped with experience and knowledge in Java, python, SQL, or relevant programming language
- Able to work and thrive in fast-paced environment; multitask and willing to meet challenging targets

- Strong verbal and written communication skills with the ability to liaise with a variety of internal stakeholders
- Fluent in English and Mandarin. Burmese language would be a plus
